PROFILE

Applied Computer Science graduate (AI & Data Engineering, HOGENT 2026) building AI-powered backends and the cloud infrastructure they run on: **FastAPI** services, **Kubernetes/Helm** deployments, **Azure AI** integrations and autonomous **LLM agents**. Available now for full-time roles in Belgium.

EXPERIENCE

AI DevOps & Cybersecurity Intern — Forvis Mazars, Ghent 2025

- Built a **Python/FastAPI REST backend with PostgreSQL** for an internal employee portal centralising news, events and reminders for ~300 employees, covered by unit and module tests.
- **Containerised and deployed** it with Docker, Kubernetes and Helm, writing the Dockerfiles, Compose setup, Kubernetes resources and a Helm chart from scratch; automated testing in GitHub CI/CD.
- Built the backend for an **Azure AI Foundry chatbot**, with API-based session and message handling in Redis, giving controlled access to AI models outside the Azure portal while keeping traceability for audits.
- Automated **cross-system leaver validation** against Active Directory; evaluated AI, regex and fuzzy matching, then shipped fuzzy matching with confidence scoring as the best balance of accuracy, performance and cost.
- Automated **employee business cards**: Python Azure Functions and Power Automate parse SharePoint data into vCards and QR codes.
- Modernised an internal **OSINT reconnaissance tool** from Python 2 to 3 and mapped domain and infrastructure relationships in **Neo4j**, surfacing shared dependencies and critical components.

Administrative Assistant — Stad Oostende, Culture Department 2018 – present

- Support the organisation of cultural events and the monitoring of protected Belgian heritage.

Waiter — Venetiaanse Gaanderijen Restaurant, Ostend 2017 – present

- Fast-paced, customer-facing work, combined with full-time studies throughout my degree.

PROJECTS

Takaro MCP Server — Bachelor's thesis · TypeScript, Node.js, Docker ([GitHub](#)) 2026

- Built a **Model Context Protocol server** that gives LLM coding agents 36 tools to autonomously write, deploy and test modules on the Takaro game-server platform, closing the develop–deploy–test loop without human input.

Monitoring & Alerting Pipeline — school project, solo HOGENT

- Collected system metrics with **Prometheus**, visualised them in **Grafana** dashboards and sent threshold alerts to Discord via webhooks; validated end to end with a CPU stress test.

Event Recommender for Voka — school project, team HOGENT

- Recommended events to members of Voka (Flemish chamber of commerce) from their past ratings using **collaborative filtering**, and estimated churn for upcoming events.

Belgian Air Traffic Price Tracker — school project HOGENT

- Cron-scheduled **Selenium/BeautifulSoup** scrapers for four airlines, covering most flights to and from Belgium, loaded into **MySQL** and **Power BI** dashboards on price trends and routes.

EDUCATION

BSc Applied Computer Science: AI & Data Engineering — HOGENT, Ghent 2022 – 2026

Machine Learning, Deep Learning, Big Data, Linux, Web Services

Secondary education: Mathematics & Science — Koninklijk Atheneum, Ostend 2014 – 2020

SKILLS

AI / ML: Machine Learning, Deep Learning, LLM agents, MCP, Azure AI Foundry, Azure ML, recommender systems

Cloud & DevOps: Azure (Functions), AWS, Docker, Kubernetes, Helm, CI/CD (GitHub), Prometheus, Grafana, Linux

Backend & Data: FastAPI, REST APIs, PostgreSQL, MySQL, Redis, Neo4j, SQL, Power BI, web scraping

Programming & tools: Python, TypeScript, JavaScript, Java, C++, SQL, Git, Power Automate, SharePoint

Languages: Dutch (native), Serbian (native), English (fluent), French (professional)
